📍 Bengaluru, INDIA 🔗 kundanthakur.github.io/my-portfolio/

Profile Summary

Staff Software Engineer with 8+ years of experience building scalable microservices, distributed systems and enterprise security platforms using Java. Recently expanded into AI engineering by designing and deploying a production-grade Retrieval-Augmented Generation (RAG) application powered by OpenAI, ChromaDB and FastAPI. Passionate about building scalable backend systems, AI-powered applications and cloud-native architectures.

Work Experience

Yojanify AI | <https://yojanify.com>

AI-powered Government Scheme Discovery Platform (RAG)

- Designed and deployed an end-to-end **Retrieval-Augmented Generation (RAG)** platform enabling users to discover Indian Government schemes using conversational AI.
- Built a document ingestion pipeline with **PDF parsing, text chunking, OpenAI embeddings, and ChromaDB** for semantic search.
- Developed REST APIs using **FastAPI** for document upload, streaming chat (SSE), and session management.
- Integrated **GPT-4o-mini** to generate context-aware responses with source citations.
- Deployed the application on a public domain with a production-ready backend.

Tech: Python, FastAPI, OpenAI GPT-4o-mini, ChromaDB, RAG, Vector Embeddings, SSE, HTML, JavaScript

Staff Software Engineer

02/2026 – Present

Nagarro (Client: Tesco)

- Built a **PKIaaS platform** to automate certificate lifecycle (validation, CSR generation, CA integration).
- Developed backend services for request validation, certificate issuance, and secure storage using **Vault**.
- Created **Angular UI** for self-service certificate management.
- Implemented **OIDC/JWT-based authentication** and event-driven workflows using **Kafka**.
- Built scalable microservices using **Java & Micronaut**, deployed on **Kubernetes**.

Tech: Java, Micronaut, Kafka, React, Couchbase, Angular, Kubernetes, OIDC, JWT, Vault

Lead Engineer

09/2019 – 01/2026

Info Edge

- Responsible for developing and maintaining various applications, including Single Sign-On (SSO), e-signature modules, and integration components.

- Lead a team of developers in designing and implementing a microservices-based architecture for high-traffic web applications.
- Mentoring junior engineers, conducting code reviews, and ensuring code quality and adherence to best practices using tools like SonarQube.
- Collaborate closely with cross-functional teams to gather requirements and deliver robust, scalable solutions.

Software Developer

11/2018 – 10/2019

Silver Moda

- Developed a rule-based fraud monitoring system for POS transactions.
- Generating daily Excel-formatted reports, creating and maintaining detection rules to ensure high accuracy, and implementing core FRM features based on customer requirements.
- The system collects data via REST APIs, processes it in batch mode for analysis, and delivers actionable insights.

Software Developer

02/2018 – 11/2018

BetterPlace Safety Solutions

- Developing a web-based RESTEasy application using Spring MVC, Hibernate, MySQL, and JSON, with deployment on WildFly.
- Frontend interactions are implemented using JavaScript and jQuery.

Education

B.Tech/B.E. - Computers

2017

Biju Patnaik University of Technology (BPUT)

- Grade: 7.2/10

Key Skills

Languages

Java
Python
JavaScript

Frontend/Data/DevOps

- Angular
- MySQL
- NoSQL Mongo
- Docker
- Kubernetes
- Kafka
- Data Structures And Algorithms
- Couchbase
- ChromaDB

Backend

- Spring Boot
- Spring Security
- Micronaut
- FastAPI
- REST APIs

AI / LLM

Retrieval-Augmented Generation (RAG)
OpenAI API
Embeddings
ChromaDB
Semantic Search
Vector Databases
Prompt Engineering

Architecture

- Microservices
- Distributed Systems
- Event-driven Architecture
- Security Assertion Markup Language SAML
- REST
- System Design
